Product Specification

ARB’s engineers have developed both left hand and right hand recovery points for the 2015 on Mitsubishi L200. The recovery points have been designed to fit with ARB bars to achieve the 8T rating. The rating has been achieved when fitted in conjunction with the chassis brackets designed and developed for the Australian specification L200’s. Fitment has not been confirmed with other manufacturers bars.

If being fitted with an ARB bar it is recommended that recovery points and bar are fitted at the same time. If a bar has already been fitted this will need to be removed to enable recovery points to be fitted.

The recovery point is fitted with 1 x M8 bolt, 5 x M10 bolts and 3 x M12 bolts. Full step by step fitting instructions are provided to enable fitment to vehicles fitted with an ARB bar. Torque settings are provided for all fasteners.
The recovery point is rated in an angled direction of pull for angles up to the maximum turn angle of the front wheels of the L200. To ensure that during an angled recovery there are no inappropriate forces exerted on the shackle, the recovery point has a long slot to allow the recommended 4.75t bow shackle to be fed through and the 8000kg strap attached via the pin instead of the bow.

This allows even distribution of the recovery force through the shackle to avoid side loads on the pin. Side loads on the pin invoke forces that tend to open up the shackle, putting unwanted load on its weakest point, the pin threads.

A single recovery point including fasteners weighs approximately 4.5kg.

**Safety:**

Each ARB Recovery Point is supplied with an operator instruction card that identifies the correct method of attaching both the shackle and recovery strap. Important safety information is also included. This card is designed to be kept in the glove compartment of the vehicle.

Recovery points also have a warning label attached which clearly identifies the strap and shackle combination to be used with the point and usage and safety information.

Maximum strap rating is an 8000kg strap. Recommended shackle rating is 4.75t.

**Recommended Fitting Times:**
